Design

Untitled1 x

The workflow diagram illustrates a machine learning process. It begins with an 'ArffLoader' component, which feeds into a 'ClassAssigner'. The 'ClassAssigner' then connects to a 'ClassValuePicker'. The 'ClassValuePicker' outputs to a 'CrossValidationFoldPicker'. From the 'CrossValidationFoldPicker', the workflow splits into two parallel paths. The top path uses a 'NaiveBayes' classifier, while the bottom path uses a 'RandomForest' classifier. Both classifiers feed into their respective 'ClassifierPerformanceEvaluator' components. The outputs of these evaluators are then combined in a 'ThresholdDataModelPerformanceChart'.
